# Reflex

The Reflex Wiper System is a single sheet centrefeed dispensing system delivering a fast and controlled wiping solution to reduce costs, servicing time and cross-contamination.

Because the Reflex roll automatically breaks at each perforation, it allows the user to pull just one sheet with one hand, maximising ease of use and minimising wastage.

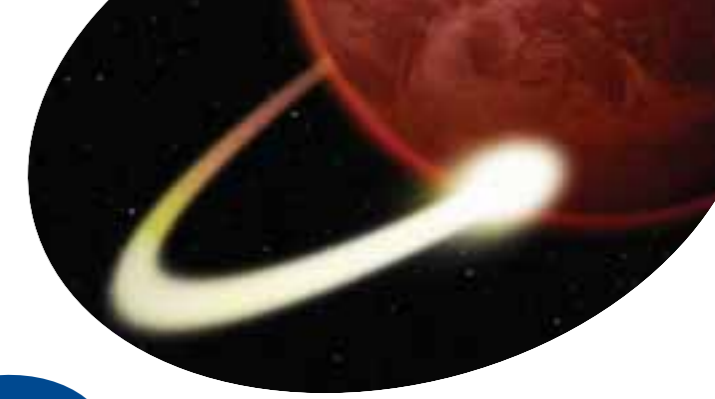

Cost-in-use tests have shown that Reflex can reduce consumption by over 50% against traditional centrefeed systems.

- Maximised ease of use, only one hand needed to dispense a sheet
- Perforated roll, combined with our patented dispenser design ensures sheets break off one at a time, every time
- Dispenser is not touched therefore helping to reduce cross-contamination
- Reduced servicing time due to longer lasting roll
- Fully enclosed dispenser protects from dirt and is water resistant

# REFLEX COMET SYSTEM

## Before

### Before Comet:

- Cores are removed manually
- Removed cores create mess
- Tail is prepared manually for loading

## After

### Now, with the new Comet system:

- Coreless roll saves time in preparation and in loading
- No wasted paper as sheets are not lost when sticking to core
- No messy cores after loading

Comet is produced with 

- Each sheet is 25% more absorbent than our Hydratek™ 2 ply product
- Softest paper ever
- Strong when wet

Delivering a performance that cannot be beaten!
